We are a young and ambitious team of creative minds in the field of IT Security who have turned their hobby into a profession. We help our customers – who range from innovative start-ups to DAX-listed corporations – to master the challenges of IT Security. We offer exciting tasks and interesting projects to those who are passionate about new technologies and who enjoy getting to the bottom of complex issues.

Join our team! We are interested in hiring you asap as a:

Cloud Security Consultant (m/f/d)

Your tasks	**Your Profile**
Your work as a Cloud Security Consultant includes:	You noticed that the cloud is here to stay and you appreciate that. The Azure Portal, the AWS Management Console, or Google Cloud Console are your second home that the landlords are changing daily. You know that AWS CloudFormation, Google Cloud Deployment Manager, and Azure Resource Manager are the same Service, but you are also using Terraform. You are interested in IT security, follow the latest developments in the area of cloud computing, know why containers run in pods, and love your command line interface more than all the management portals.

Your tasks

Your work as a Cloud Security Consultant includes:

- ▶ Identification and risk assessment of security vulnerabilities using methods such as penetration testing, technical analyses, and configuration reviews

- ▶ Execution of threat analyses and implementation of realistic attack scenarios specific to cloud environments

- ▶ Individualized consultation with our customers on cloud security topics ranging from security architecture over deployment up to policies

- ▶ Presentation of results to customers, as well as consultation regarding improvement measures

Depending on the extent of your previous knowledge, your experienced and specialized colleagues will introduce you to the various assessment methods and approaches. At the same time, you will complete the Offensive Security Certified Professional (OSCP) training.

Your Profile

You noticed that the cloud is here to stay and you appreciate that. The Azure Portal, the AWS Management Console, or Google Cloud Console are your second home that the landlords are changing daily. You know that AWS CloudFormation, Google Cloud Deployment Manager, and Azure Resource Manager are the same Service, but you are also using Terraform. You are interested in IT security, follow the latest developments in the area of cloud computing, know why containers run in pods, and love your command line interface more than all the management portals.

If you have these traits along with core values such as reliability and honesty, we will be a good fit. You also have:

- ▶ a degree from a university or technical university in informatics or electrical engineering, or comparable training and/or practical experience

- ▶ solid knowledge of cloud security and extensive technical know-how

- ▶ analytical thinking, dedication, and the ability to rapidly and independently familiarize yourself with new topics

- ▶ very good ability to communicate in German and English (spoken and written)

Other good reasons for working with us, besides great colleagues, a flexible working environment and plenty of creative freedom, are described in detail on our website.

Your new workplace
will be in Ulm, Hamburg or remote.
